

# Current sensors optimized for large-current type

Lineup of large-current type current sensors essential for the rapidly increasing high-power renewable energy market.

## Features

- Make your Inverter system lighter and smaller
- Higher accuracy with improved Offset and Temp-drift
- Noise reduction with accurate position and torque control

## Application

- PV inverter
- Wind power converter
- HVDC and FACTS
- Energy storage systems
- Industrial motor drives

| Appearance                                                                          | Current         | Supply voltage | Circuit | Primary Conductor          | Model |
|-------------------------------------------------------------------------------------|-----------------|----------------|---------|----------------------------|-------|
|    | 500~2500A       | ±15V           | Open    | Penetration<br>□64.0*21.0  | L51S  |
|   | 1500,2000,2500A | ±15V           | Open    | Penetration<br>□104.5*22.5 | L55S  |
|  | 2000A           | ±24V           | Closed  | Penetration<br>O61         | S30S  |
|  | 1000A           | ±24V           | Closed  | Penetration<br>O42         | S42S  |
